# Informative

Technical support

1. **with water leak detector - Flood Sensor** and an alert message to the user

But, we have the possibility of popups or just through an program task, under trigger add the notification through e-mail or SMS?

Are messages forwarded to a single user, that is, if there is a need to send to more users, does each one need an exclusive user license? Therefore, one license per user with the ability to receive notifications/alerts.

## 2. Appointment/Scheduling by users

Is a license required per user, so that everyone can make notes/schedules on the calendar or not? Or, is there the possibility - through bOS Cliente - that people have access and can act on the calendar, even with a single user license?
